

RESTORATION EQUIPMENT

DBK 2 HEAT DRYER

AIRFLOW

-650 M3/HR (RECIRCULATION MODE)

-595 M3/HR (EXHAUST MODE)

POWER - 240 VOLT - 8.9 AMPS

H-350 X W-650 X D-930 (MM)

WEIGHT - 25KG

The DBK 2 Heat Dryer's unique operation is based upon its continual evaluation of the humidity and temperature of the room to be dried and then operating in the mode that provides maximum drying effect.

The DBK 2 Heat Dryer can cycle between two modes to maximize the amount of water removal, operating on either "Recirculation Mode" whereby the area is continuously heated up until either a temperature/humidity limit is reached or "Exhaust Mode" by exchanging the warm, humid air with warm, dry replenishment air.
