BOOST BAR ADAPTORS

12 Port Adaptor

Is the perfect tool for introducing temperature controlled, dry air into hard to reach areas of water damage. Comes with 12 x 3 metre hose extensions.

4 Port Adaptor

Gives you the ability to take heated airflow from the system and deliver it to four separate drying chambers.

90 Degree Adaptor

Channels the heated airflow up towards ceiling level or it can be rotated to channel the airflow down into a subfloor or crawl-space.

These adaptors attach to the DBK Boost Bar to provide greater flexibility when drying different areas.
